

Book Information

Photocatalytic Nanomaterials for Environmental Applications

Eds. Rajesh J. Tayade, Vimal Gandhi

Handbook / color print, paperback

Photocatalytic nanomaterials have a great potential in such applications as reduction of carbon dioxide and degradation of various pollutants. They are equally important in the production and storage of energy, e.g. in the conversion of solar energy to electricity, and the production of hydrogen in photoelectrochemical cells.

Keyword: Photocatalytic Nanomaterials, Nanocomposites, Solar Energy Conversion, Carbon Dioxide Reduction, Hydrogen Generation, Degradation of Pollutants, Titanium Oxide, Silver Phosphate, Cerium Oxide, Zinc Oxide, Zinc Sulfide

ISBN 13: 978-1-945291-58-6

Publication Date: 2018 (2/25/2018)

486 pages, color print, paperback, USD 140.00

Materials Research Foundations Vol. 27

BISAC Subject Classification code: TEC021000

BIC/Thema Subject Classification code: TGM

Imprint: Materials Research Forum LLC, publisher's sales rights are Worldwide

Summary:

Photocatalytic nanomaterials have a great potential in such applications as reduction of carbon dioxide and degradation of various pollutants. They are equally important in the production and storage of energy, e.g. in the conversion of solar energy to electricity, and the production of hydrogen in photoelectrochemical cells.

Research on synthesis, characterization and specific applications is reported for titanium oxide and a number of other promising catalysts, such as silver phosphate, cerium oxide, zinc oxide and zinc sulfide.
